NEW RULES

Kickoffs will be moved up to the 35 yard line from the 30

The kicking team will only have a five yard running head start on kickoff

Touchbacks will move from the 20 yard line to the 25 yard line only on kickoffs and free kicks after a safety. Players will be forbidden to leap over other players when blocking punts

Players who lose their helmets during a play (except when caused by fouls such as grabbing the facemask) will have to leave the field for one play

Only players in the Tackle box and not in motion can block below the waist

PICKING AN UPSET

There has been a lot of college football played S/97, 15 years worth of it. If you count each FBS team playing a game (so 2 tm each gm) in that span there were 20,882 diff gm of data to analyze. Let's look at the biggest favorites and you will see that Las Vegas does its job well picking out big favorites. Since 1997 there have been 596 teams that have been favored by OVER 31 points in

a weird year that was, the 2nd biggest upset ever was also in 2007 when Syracuse (+37) beat Louisville. The other 3 huge upsets since 1997 were: Temple (+35.5) over Virginia Tech in 1998, Central Michigan (+35.5) over Western Michigan in 2000, James Madison (+35) over Virginia Tech in 2010 and North Texas (+32) over Texas Tech in 1997. Basically an underdog of 31 points or more in a game, wins

1% of the time.

Now let's look at the chances of your favorite team winning if they are installed as an underdog of 24.5 to 31 points. Since 1997 there have been 756 teams that have been favored by 24.5 to 31 points in a game. You would expect the underdogs would have a better chance of winning outright than the above teams and naturally they do. In that span 30 teams that have been favored by that margin have lost straight up in a game with three such upsets last year. Texas Tech was +28.5 when they upset Oklahoma on the road, Iowa St was +27.5 when they upset Oklahoma St at home and Sacramento St was +27.5 when they beat Oregon St on the road. The amount of upset did not go up as much as we thought they would as upsets occurred only 3.97% of the time or 1 out of every 25.2 games.

You would figure that the percentage of upsets in the 17.5 to 24 point favorites level would go up drastically from that 3.97% in the previous category. Since 1997 there have been 1,316 teams that have been favored by 17.5 to 24 points. We're still a little surprised that there were only 89 upsets in this level of favorites over the 15-year span. That is just 6.8% upsets which comes out to 1 upset loss for every 14.8 teams that are favored by 17.5 to 24 points. Last year there were six such upsets which included UNLV over Hawaii, Northwestern over Nebraska. Wyoming over San Diego St, New Mexico St over Minnesota, Colorado over Utah and UAB over Southern Miss.

We will start breaking it down into smaller categories as we continue to go down in level of favorit-ism. The next category to look at are teams that are favored by 14.5 (more than 2 TD's) to 17 points. Since 1997 there have been 836 teams that have been favored by 14.5 to 17 points in a game. Of the 836 teams favored by this amount 110 have lost the game outright. That is close to double the odds as the category above as 13.2% of the teams favored by 14.5 to 17 points lose outright and an upset occurs 1 time for every 7.6 games played in that level. There were only 8 such upsets last year including USC over Oregon.

The next level down that we'll look at is the 10.5 to 14 point category. From 1997 - 2011 there were 1,458 teams that were favored by this level. Of those 1,458 games there were 306 upsets which was 20.99% of the time. That still means that roughly 4 out of every 5 teams favored by 10.5-14 points wins the game with an upset occurring once every 4.8 times.

From 1997-2011 there were 1,360 teams that were favored by 7.5 to 10 points and of those 1,360 teams there were 359 upsets which was almost the same results as the favorites from 10.5 to 14. That means that 26.39% of the time a team was favored by 7.5 to 10 points they lost outright and that translates into 1 upset every 3.8 games. Since 1997 there have been 2,476 teams that have been favored from 3.5 to 7 points. These are

teams that are expected to win the game but the game should be close. The last time we tightened up the category the upsets went from every 4.8 games to every 3.8 games. Should we expect 1 in every 2.8 games here? Since 1997, 865 of the 2,476 teams that were underdogs of 3.5 to 7 points have pulled outright upsets and that translates into 1 every 2.9 games or 34.9% of the time.

Now we get to the category that will tell us if Las Vegas knows what they are doing. Games where a team is favored by 3 points or less. These games are basically toss-ups but Vegas favors one team and makes them the favorite. What percentage of teams pull minor upsets as underdogs of 3 points or less? Since 1997 there have been 1,643 favorites of 3 points or less. There have been 785 "upsets" by teams that are underdogs of 3 points or less which comes out to be 47.8% and that

Shows these games are definitely toss-ups! Typing this, we are thinking that 3 point games should have a much higher % of the favorite win-ning so let's take a closer look at just those games. There have been 576 games in which a team was favored by 3 points by Las Vegas over the last 15 years. How many times does that team win outright? The answer is 319 times or 55.4% of the time. That is 319 times the favorite has won and 257 times the underdog has won which means the underdog is almost as likely as the favorite to win the game when the line is exactly 3 points.

Here is a quick chart showing the chances of a team winning outright depending on where Las Vegas sets the line.

FAVORITE OF	# OF GMS	LOST OUTRIGHT	%						
31+ pts	596	6	1.01%						
24.5-31	756	30	3.97%						
17.5-24	1316	89	6.76%						
14.5-17	836	110	13.16%						
10.5-14	1458	306	20.99%						
7.5-10	1360	359	26.39%						
3.5-7	2476	865	34.94%						
3 or less	1643	785	47.78%						

Add POWER SWEEP!! Power Plays subs pay just \$50

1-347-677-1700 Control and the set of the se

These Power Play Forecasts are the most unique in the country because they are based on **Northcoast Sports' Private Power Ratings**. Our ratings are unlike any computer rating, as we take into account all of the following: Strength of Opponents Individual Units (Rushing Offense and Defense, Passing Offense, & Defense, Scoring Offense and Defense, Garbage Yards, Weather, Injuries, Home Field Edge, and Successful Unbalanced Attacks). Here is how each is reflected:

Strength of Opponent: Our ratings do not just take the opposing team's overall power rating into account. For example, in 1992, Washington's defense vs the rush was rated at a "110" (From 1-100). They faced Colorado and allowed 183 yds rushing and **dropped 12 spots** in the national rushing defense ratings. However, Power Plays took into account the potent Buffalo run attack and had forecasted the Huskies yielding 225 yds. Due to the fact they did better than the forecast, Power Plays raised their rating to 112 even though they slipped in the national (straight yardage) rankings. Another example was Michigan vs Purdue in 1989. Michigan held Purdue to just 45 yards rushing and improved their ratings in rushing defense in the national statistics. However, our ratings had them rated at a 102 and moved them down to 99, as they should have yielded just 32 yards to an impotent Purdue rush attack. Next time an announcer on TV tells you that a certain team is #3 in the country vs the offensive and defensive category will be listed in each week's issue of Power Plays.

Garbage yards: These are yards that a team gains or allows in the final minutes of a game when it has been decided. For example, Team A is ahead 63-0 and allows 93 yards passing for a TD vs its fourth string defense. These yards are **counted** into national ratings, **but not in Northcoast Sports' Power Ratings**! Weather: If a game is played in miserable weather conditions and is low scoring, the straight statistics credit the defense with outstanding performances. Our

Power Ratings reflect the conditions and do not give excess credit to the defenses. Injuries: When South Carolina played NC State in 1989, South Carolina QB Todd Ellis was injured on the third play of the game. His backup, who had seen very little action all year, was not prepared and hit on just 4 of 13 passes for 65 yards. The offensive coordinator did not risk any passes. In the national statistics NC State's pass defense MOVED UP 14 NOTCHES. In Phil's Power Ratings they **stayed the same**, as the low yardage WAS NOT reflective of an outstanding performance by the defense. Home Field Edges: The weekly projection of yards and points is weighted with the home field factored in. Successful Unbalanced Attacks: In 1989, Ohio St was held to 127 yards passing vs Northwestern. This dropped OSU in the national passing offense ratings

Successful Unbalanced Attacks: In 1989, Ohio St was held to 127 yards passing vs Northwestern. This dropped OSU in the national passing offense ratings & RAISED the Wildcats in the pass defense ratings. In our ratings the two units **remained** rated the same. Why? OSU rushed for 456 yards & DID NOT HAVE TO PASS & when they did they hit 9 of 11 passes, which is VERY effective. While Northwestern's pass defense looked good in the national ratings, only Northcoast Sports' Power Ratings reflected the TRUTH!

There you have it. More than just numbers, THESE RATINGS REFLECT the true strength of each unit and allow them to have the most accurate forecast of yards gained and points allowed in the country! No other rating system takes into account all the previous factors. Next time you hear that a team is rated third in the country in pass defense, just remember, yards are not everything and Northcoast Sports' Power Plays will show you how strong the team really is.

Joining is simple: log on to <u>ncsports.com</u> and fill in the information on the front screen

NORTHCOAST SPORTS PLUS OR MINUS POWER RATINGS

The Power Ratings listed below are not based on the Power Plays, they are based on last year's final computer power rating numbers with the pluses and minuses from the off season changes factored in. They are then adjusted during the course of the season based on the final score of the games that are played on a weekly basis. The Power Ratings listed below can be used for you as a base power ratings to forecast up coming lines and strength of opponents, etc. Once again, they are not based on Power Plays and **they differ from what we have shown in recent years**, which has been our actual computer Power Ratings. These are Northcoast Sports Plus or Minus Power Ratings.

GE FOOTBALL AUGUST 30TH-SEPTEMBER 3RD NOTE: Power Plays - PP

Welcome to this week's issue of Power Plays. The Power Plays Newsletter consists of forecasts that are made by a special Power Plays rating system. This is a system developed many years ago and we regard it very highly. In our final analysis of the plays the Power Plays forecast takes up anywhere from 25 to 30% of our total analysis. You will see in the Power Plays Newsletter in the write-ups that we agree with the majority of the Power Plays forecasts. However, there are times when we will disagree with the Power Plays forecast. We want to make it clear that this is the Power Plays Newsletter and these forecasts are based purely on the power ratings. You should never use just one method, system or angle to determine your handicapping. The times that we disagree with the Power Plays Newsletter we will clearly note it. If the Power te that we like the other side of the game. With all that said here are this week's Power Plays Selections.

Northcoast Sports has the #1 ranked College Late Phone Service over 23 years in net wins as documented by The Sports Monitor of Oklahoma City, OK. Our Weekly Late Phone Selections are the same plays we release to our Executive Club Members, The Sports Monitor and SportsWatch. To celebrate the opening week of College Football we are offering the following discount to kick off the 2012 season:
